

THE FUTURE IS HERE

INNOVATION & SUPERIOR PROTECTION
THE BENEFITS OF SENTRICON ALWAYSACTIVE

Murray Pest Control

Protecting your home with the Sentricon System with 'Always Active™' technology

What is Always Active Technology?

'Always Active' Technology is a new HD (high density) Termite Recruitment Bait that has been designed to work in the harsh Australian climate. The new bait now has the added bonus of being able to remain active in the ground for up to five years before needing to be replaced, unless consumed by termites.

This is the next evolution on the old Sentricon 2 system that first required timber monitoring devices to encourage the termites to start foraging on the timber monitors before we could introduce the recruitment bait.

'Always Active' means the bait is already in place as the termites forage and feed, starting the process of eliminating the colony sooner, providing year round protection to your home.

How many site visits will I require?

With Sentricon 'Always Active' the average servicing required for an active or "heavy pressure" site is a minimum of three visits annually and for a non-active site with no evidence or "low pressure" a minimum of two visit.

This may vary depending on what is found on site after each service.

Do I need to be home?

You will only need to be home once a year for the annual visual termite inspection but if required the Sentricon Clerk will be in contact to arrange a suitable date and time to work in with your schedule.

We offer capped price servicing with no hidden costs. Included in the Annual Termite Management price is all site visits, an annual visual termite inspection to internal and external areas of your property and a component replacement guarantee.

We also offer 12 month interest free payment plans. (Conditions apply)
